Outstream Video

Outstream Video

In order for the publisher to add a video with this option they will need to use javascript to invoke the **newVideo** method, passing in a valid placement:

```
freestar.queue.push(function() {
    freestar.newVideo("placementName");
});
```

Please note, setting this up requires work done in the backend by the Freestar team. If interested,

reach out to your Customer Success or Onboarding Manager to further inquire.
