On-Call Sticky Footer

Adding an On-Call Sticky Footer

In order to add a sticky footer with this option you will need to use JavaScript to invoke the **newStickyfooter** method:

```
freestar.queue.push(function() {  
  freestar.newStickyFooter();  
});
```

optionally pass the placement name:

```
freestar.queue.push(function() {  
  freestar.newStickyFooter("placementName");  
});
```

Deleting a Sticky Footer

In order to remove the sticky footer on demand (use case would be when the "view" changes) you will need to use JavaScript to invoke the **deleteStickyFooter** method. This will work for both on call or dynamic footers.:

```
freestar.queue.push(function() {  
  freestar.deleteStickyFooter();  
});
```

optionally pass the placement name:

```
freestar.queue.push(function() {  
  freestar.deleteStickyFooter("placementName");  
});
```
